This applies to all Toyota VVTi 2.7l L4 2TR-FE engines. The particular truck I was working on with this problem was a 2010 Toyota Tacoma L4 2.7l with around 150,000 miles. The same principles for this diagnosis apply to any diagnosis on a car with an OBD2 system and a suspected misfire with no check engine codes/nor pending codes (CEL).

Can anyone shed some light about removing th cylinder head on the 2.7 2trfe engine? It's a 2008 rear wheel drive. Does the engine have to be removed or can it be done in engine bay? I think the whole timing case cover has to come off the front of the engine to loosen the timing chain to be able to remove camshafts. Any help is appreciated.
